Fraud Analysis - January 2010

Executive Summary

In January 2010, a total of 15 transactions were flagged as fraudulent. The total amount involved reached 1,234.56 USD, indicating moderate financial exposure for the period.

The fraud rate stands at 0.15%, which is within acceptable thresholds but warrants continued monitoring.

Key Findings

The largest concentration of fraud occurred in Italy, accounting for over 60% of the total fraudulent amount. This is followed by Ohio and California, which together represent another 15% of the exposure.

Card brand analysis shows that Mastercard and Visa are the most affected brands, consistent with their higher transaction volumes.

Recommendations

First, conduct a root-cause analysis on the Italian transactions to identify common merchant or product patterns. Second, strengthen the detection rules around high-value transactions exceeding 200 USD. Third, expand the fraud monitoring to cover chip-related anomalies that bypassed the physical chip verification.

Key Metrics

Metric	Value
Total Fraud Transactions	1,505
Total Fraud Amount (USD)	166,016.90
Average Fraud Amount (USD)	110.31
Fraud Rate	0.15%
Top Affected State	Italy
